Determination of Alcohol Content

- **Table Wines**
  - Contain 7 – 14% ethanol

- **Dessert Wines**
  - Contain 14 – 24% ethanol
Determination of Alcohol Content

- Physical Methods
  - Ebulliometry
  - Distillation plus Refractometry
  - Distillation plus Hydrometry
  - Gas Chromatography

- Chemical Methods
  - Enzymatic Analysis
  - Dichromate Oxidation
Ethanol Boiling Point Diagram
Ebulliometry

- Boiling point vs. ethanol concentration
  - Non-linear relationship

- Vapor composition associated with boiling liquid composition
  - Total reflux for accurate boiling point
  - Sugar errors
Ebulliometer
EBULLIOMETRIC ETHANOL

- Equipment:
  - Ebulliometer, mercury thermometer (°C), alcohol slide rule scale
  - Deionized water and cold tap water source
  - Alcohol lamp

- Reagents
  - Sodium Hydroxide (1%) Cleaning Solution: Dissolve 10 g of sodium hydroxide in 990 mL tap water. Identify as "Ebulliometer Cleaning Solution."
EBULLIOMETRIC ETHANOL

- Determine boiling point of water
- Add approximately 30 mL of deionized water to boiling chamber "A." There is no need to add cold tap water to condenser "D" at this time.
- Insert thermometer "C." Position instrument over flame.
- When thermometer reaches a stable point, allow 15–30 sec for minor fluctuations to occur. At this time, take boiling point reading and set inner scale opposite 0.0% alcohol on the "Degres Alcoolique Du Vin" outer scale.
Determine boiling point of wine

Rinse boiling chamber with a few milliliters of wine to be analyzed and drain (This prevents dilution of sample).

Dilute 50 mL of wine to 100 mL in a volumetric flask. Place approximately 50 mL of wine in boiling chamber.

Fill condenser with cold tap water

Insert thermometer such that it is partially immersed in the liquid, and place instrument over heat source.
EBULLIOMETRIC ETHANOL

- Determine boiling point of wine
- When thermometer reaches a stable level, allow 15–30 sec for changes and take reading.

- Locate the boiling point of wine on the inner "Degres du Thermometre" scale and record the corresponding alcohol content (% vol/vol) on the outer scale.
